News Release March 2016

One Part, High Temperature Epoxy

epoxySet introduces the SetWorx 411HP to its vast array of one part epoxies. This heat cure epoxy offers excellent temperature stability from -55 to 230˚C. Originally developed for bonding components to printed circuit boards, it is also an excellent structural adhesive when bonding ceramic, glass, metals and high temperature plastics such as fiberglass, polyester and phenolics. It is low outgassing and meets the requirements of MMM-A-132 for heat resistant structural adhesives. EB-411HP is aluminum filled but, other metallic and non metallic versions are available. Part of the SetWorx product line, 411HP is non-hazardous for shipping.

epoxySet is a custom formulator and manufacturer of engineered epoxy, urethane, silicone and grease systems for the electronic, medical, semiconductor, optics, automotive and aerospace industries. We specialize in unique custom formulations. Call us at 401-726-4500 to discuss unique solutions for any engineering application.
