## *Converging Science & Care: KYZEN Provides Information to Keep Businesses Safe, Successful during the COVID-19 Pandemic*

**NASHVILLE — March 2020** — KYZEN, the global leader in innovative environmentally friendly cleaning chemistries, announces two important resources to help the industry during the COVID-19 pandemic. During these uncertain and unprecedented times, KYZEN stands out as a leader who continually converges care with science.

Two free resources have been added to the company's E-Knowledge Center.

The first resource is a KYZEN short summary including recommendations about current practices involving hand sanitizers and lotions in manufacturing production areas. This summary is based on a paper developed and presented at IPC/APEX 2010 by Collins Aerospace and is available [here](#) along with the full paper.

The second resource is a technical brief providing alternatives to Isopropyl Alcohol (IPA). Demand for IPA is spiking and, in these challenging times, demand and prices for IPA are likely to continue increasing rapidly due to IPAs' disinfectant qualities. Information about alternative solutions can be difficult to come by for these types of applications. To address that information gap, KYZEN has developed a technical brief to help you understand the alternatives and options. The technical brief can be found in the KYZEN E-knowledge Center by searching the keyword "IPA." This resource includes useful information about safe alternatives to IPA as well as conservation techniques for those continuing to use IPA.

You'll find KYZEN at the corner of Precision Cleaning Science and Care – the exact place the company has been since it opened its doors 30 years ago.

"Our greatest hope is that all our industry friends, customers and partners stay well during this pandemic. While we figure out how to conduct business during this time, we want you to know that you and your families are in our thoughts," said Tom Forsythe, VP, on behalf of the entire KYZEN Corporation.
