## FINETECH Expands with New Customer Center in Amherst, New Hampshire

FINETECH, a leading provider of precision bonders and advanced rework equipment, announces its new, larger facility in Amherst, New Hampshire. The stand-alone building houses the Finetech eastern sales and applications support team. Its extensive equipment room features both R&D and production die bonders, as well as rework systems. The systems are available for demonstration, customized training and sample bonding.

As FINETECH grows its production equipment segment, it understands the importance of local engineering support and having equipment onhand for a range of needs. The company's mission is to provide solutions for each stage of the customer journey - from R&D and prototype, to fully automated production.

Neil O'Brien, general manager, said, "The new building is helping us keep pace with our growth in North America. We have the ability to showcase our full range of capabilities here and in our Gilbert, Arizona facility. It gives our customers convenient access to not only equipment, but application and technical resources. Access to our automated bonders (Femto2 and FineXT5205) has been in high demand. By having these systems available, we have already partnered with customers to develop processes in next generation photonic assemblies, high density sensors, flexibly hybrid electronics (FHE), as well as implantable devices".

### About Finetech

Finetech is a leading manufacturer of equipment for manual and fully automatic high-precision bonding and component rework. The company services customers in a broad range of industries

including aerospace, medical technology, consumer electronics, semiconductor, optoelectronics, military, universities and research. Corporate headquarters and main production are in Berlin, Germany. Sales and Technical support centers are located in Gilbert, Arizona; Amherst, New Hampshire; Shanghai, China; Kuala Lumpur, Malaysia; and Tokyo, Japan.
