### **R&D Circuits Adds 2<sup>nd</sup> Shift to their Assembly Operation**

*South Plainfield, NJ:* R&D Circuits, manufacturer of advanced printed circuit boards and assemblies, has announced that it is adding a 2<sup>nd</sup> shift to its assembly operation, which is expected to be fully staffed and operational in January 2010.

At a time when many organizations are still plagued with reductions in staff, Tom Bresnan, Director of Sales & Marketing, had this to say about R&D's impressive growth, "Business in our segment has been strong, and we anticipate our business doing even better in 2010. The addition of this 2<sup>nd</sup> shift for our assembly operation is part of a growth plan for R&D that we are pleased to be able to implement. It will serve to double our assembly capacity, which is necessary due to the addition of several new customers."

R&D has continued to grow over the past several years, expanding both the scope and size of its operations. R&D acquired Anestel Corporation in 2008, further developing their board-to-board interconnect product offering; and is poised for several manufacturing process line optimizations and additions in the coming year.

### **About R&D Circuits**

#### **About R&D Circuits, Inc.**

Founded in 1969, R&D Circuits is a leading manufacturer of time critical, technologically advanced printed wiring boards for the ATE industry. Headquartered in South Plainfield, NJ, R&D Circuits and its subsidiaries offer advanced PWB design, engineering, fabrication and assembly manufacturing services to leading electronics OEMs and their partners worldwide in the semiconductor test industry.
