

For Immediate Release:

Successful Fabless Semiconductor 2011:

Technology and supply chain challenges for fabless semiconductor companies

Lyon, France – Oct. 10, 2011 – Yole Développement and Serma Technologies announced the conference, Successful Fabless Semiconductor 2011, jointly organized in Paris, from November 8 to 10. With three main sessions: Industrialization, Design and Packaging, SSF 2011 program covers technology and supply chain challenges for the fabless companies. Both partners, Yole Développement and Serma Technologies, invited worldwide industrial players of both large global companies & SMEs. Debates and networking time are organized at the end of each session.

Fabless semiconductor companies constantly face the challenge of designing competitive products which can easily be manufactured by their manufacturing partners with good yields. Comprehensive access for their design, test and quality engineers to the design rules and guidelines is key to implement the required Design for Manufacturability (DfM) practices.

This becomes even more critical with the ever widening array of IC packaging technologies and solutions: how to make the right package platform choice for a given product? What is the most optimized trade-off between electrical and thermal performance, power consumption, reliability, size, manufacturability and cost of the packaged integrated circuit? How to find the right manufacturing partners for the chosen technology to minimize risks and costs? Should the technology choices influence the choice of the manufacturing partners, or should it be the other way round? How to access the latest 3D and Wafer Level Packaging technologies with controlled risks and without cost penalties? How can fabless companies also influence the evolution and road mapping of the semiconductor packaging and test industry?

These are the hot questions Serma Technologies and Yole Développement propose to debate through the dedicated event.

If you are involved with the semiconductor fabless business, this is the one event you need to attend!

About Serma Technologies – www.serma-technologies.com/en

Specialised in electronics expertise and consulting, SERMA TECHNOLOGIES offers services in Electronic Technologies Management. Laboratory of analyses and expertise on components, boards and systems at a glance, SERMA TECHNOLOGIES has developed its expertise in industrial process management and technologies, up to the integration process

About Yole Développement – www.yole.fr

Beginning in 1998 with Yole Développement, we have grown to become a group of companies providing market research, technology analysis, strategy consulting, media in addition to finance services. With a solid focus on emerging applications using silicon and/or micro manufacturing Yole Développement group has expanded to include more than 40 associates worldwide covering MEMS, Microfluidics & Medical, Advanced Packaging, Compound Semiconductors, Power Electronics, LED, and Photovoltaic. The group supports companies, investors and R&D organizations worldwide to help them understand markets and follow technology trends to develop their business.
