

## PRESS RELEASE

### FOR IMMEDIATE RELEASE

#### **Dage to exhibit X-ray inspection CT option and Bondtester at Semicon West**

*June 27, 2006, Fremont, California* – Dage Precision Industries will exhibit two of its newest developments in x-ray inspection and bondtesting technology in booth 7315 at the Semicon West show scheduled to take place on July 10-13, 2006 at the Moscone Center in San Francisco, California. On display will be the Dage XiDAT XD7600NT digital x-ray inspection system equipped with a new computerized tomography (CT) option, and the enhanced Dage 4000HS High-Speed Bondtester.

The new CT option is available for the award winning XiDAT XD7600NT x-ray inspection system and further refines its outstanding performance with volumetric measurement of solder joints. This new CT capability is available as an option with new systems and is ideally suited for analytical analysis of solder interconnections for critical applications such as stacked die, MEMS, package-in-package and package-on-package.

Dage's 4000HS High-Speed Bondtester is the result of considerable research as part of a US consortium and addresses the need to detect brittle fracture failures in the ball-to-pad interconnection of lead-free semiconductor devices. The capabilities of the latest generation of the 4000HS have been further enhanced with digital transducer signal processing, force versus displacement (FvD) curves, and fractional energy calculation.

With US headquarters located in Fremont, California, Dage Precision Industries, Inc. manufactures and supports a complete range of award winning digital x-ray inspection systems and bond test equipment for the printed circuit board assembly and semiconductor industries.
