

CyberOptics' CyberCMM Software Receives 3rd Award Since Introduction

Minneapolis, Minnesota — August 2020 — [CyberOptics® Corporation](https://www.cyberoptics.com) (NASDAQ: CYBE), a leading global developer and manufacturer of high-precision 3D sensing technology solutions, announces that it was awarded a 2020 SMT China Vision Award in the category of Software – Process Control for its CyberCMM™. The award was presented to the company during an Aug. 26, 2020 ceremony that took place during NEPCON Asia in Shenzhen.

CyberCMM is a comprehensive software suite of coordinate measurement tools that provides highly accurate, 100 percent metrology-grade measurement on all critical points much faster than a traditional coordinate measurement machine (CMM), including coplanarity, distance, height and datum X, Y. A fast and easy setup can be performed for programming complex applications on the world's first in-line CMM – the SQ3000™ Multi-Function system, as compared to a slow, engineering resource-intensive set-up that typically requires multiple adjustments with traditional CMMs.

“We are delighted to receive another award for our CyberCMM software,” said Dr. Subodh Kulkarni, president and CEO, CyberOptics, “Customers are valuing the ability to not only detect critical defects, but to measure critical parameters in order to quickly and effectively manage their processes. Accomplishing this with an all-in-one system provides a significant competitive advantage.”

The CyberCMM suite and the latest 3D AOI software provide ultra-fast programming capabilities, auto tuning and enhancements that significantly speed set-up, simplify the process, reduce training efforts and minimize operator interaction.

SMT China magazine launched the SMT China Vision Awards in 2007 to recognize both international and domestic providers of SMT equipment, materials, software and services that have made outstanding contributions to the rapid growth of China's electronics manufacturing industry by their inventions and innovations.

About CyberOptics

CyberOptics Corporation (www.cyberoptics.com) is a leading global developer and manufacturer of high-precision 3D sensing technology solutions. CyberOptics' sensors are used for inspection and metrology in the SMT and semiconductor markets to significantly improve yields and productivity. By leveraging its leading edge technologies, the Company has strategically established itself as a global leader in high precision 3D sensors, allowing CyberOptics to further increase its penetration of key

vertical markets. Headquartered in Minneapolis, Minnesota, CyberOptics conducts worldwide operations through its facilities in North America, Asia and Europe.

Statements regarding the Company's anticipated performance are forward-looking and therefore involve risks and uncertainties, including but not limited to: a possible world-wide recession or depression resulting from the economic consequences of the Covid-19 pandemic; the negative effect on our revenue and operating results of the COVID-19 crises on our customers and suppliers and the global supply chain; market conditions in the global SMT and semiconductor capital equipment industries; trade relations between the United States and China and other countries; the timing of orders and shipments of our products, particularly our 3D MRS-enabled SQ3000 Multi-Function systems and MX systems for memory module inspection; increasing price competition and price pressure on our product sales, particularly our SMT systems; the level of orders from our OEM customers; the availability of parts required to meet customer orders; unanticipated product development challenges; the effect of world events on our sales, the majority of which are from foreign customers; rapid changes in technology in the electronics and semiconductor markets; product introductions and pricing by our competitors; the success of our 3D technology initiatives; the market acceptance of our SQ3000 Multi-Function inspection and measurement systems and products for semiconductor advanced packaging inspection and metrology; costly and time consuming litigation with third parties related to intellectual property infringement; the negative impact on our customers and suppliers due to past and future terrorist threats and attacks and any acts of war; and other factors set forth in the Company's filings with the Securities and Exchange Commission.
