

Machine Vision Products to Introduce the Versa Pro. A New, High Performance AOI Platform for SMT and Advanced Inspection Requirements at Productronica 2023.

Vista, CA, USA – November 13, 2023: Machine Vision Products today announced it would be launching the Versa Pro system. The Versa Pro platform provides SMT inspection capabilities for the most challenging products. Using our projector based technologies we can provide our advanced inspection capabilities to multiple markets.

Come and discuss the Versa Pro at **Messe München** in Munich from November 14th to 17th 2023. This year Machine Vision Products are exhibiting in **Hall B2 Stand 457**.

Introducing the Versa Pro

The new Versa Pro system provides high accuracy 3D inspection of SMT and PCB assemblies using the latest high end projector based 3D technology. The new platform provides many innovations including:

The design of Versa Pro advances the precision of automated inspection for SMT by using a precision granite stage that provides enhanced stability over other platforms. The Versa Pro reduces vibrations and enhancing positional accuracy for the users of the platform.

Our latest 3D projector technology provides repeatability below 1 um allowing the user to be certain of the results from the system.

In addition MVPs platforms uniquely allow for multiple lighting options. If you need 3D imaging you can use the Versa Pro's multiple angled projectors and lighting options. If you need surface inspection you have the ability to use our advanced lighting solutions to enhance inspection and find many defects that would otherwise be hidden to other technologies.

The Versa Pro also provides access to MVP's extensive algorithm capabilities. Users will have access to both defect and measurement based capabilities that have been field proven over the previous 30 Years.

Our recently updated traceability tools allow users to monitor of the increased accuracy, repeatability, defect detection capabilities to continually improve yields and quality.

About MVP

MVP continues to be a leader and innovator in the global inspection arena by developing all of their product offerings. This provides a much better cost structure to the end user. Additionally, because all development is performed in-house, the support structure is second to none. With 30 years of leadership, MVP is taking multiple steps to continue to provide the overall lowest cost of ownership when compared to any competitor globally. For additional information on this unique solution, please visit us at www.machinevisionproducts.com or visit us at **Hall B2, Stand 457** at Productronica 2023 where we can discuss your application requirements.
