Presto Engineering Achieves EAL6 Certification for Secure Product Provisioning

*Certification involves set of stringent quality assurance requirements for protecting
high-value assets against significant risks*

Meyreuil, France – November 12, 2019—[Presto Engineering](#), an outsourced operations provider to semiconductor and Internet of Things (IoT) device manufacturers, has achieved EAL6 (Evaluation Assurance Level 6) -- an assurance and independent verification of very high levels of security to protect valuable data.

“Presto Engineering is a secured application leader that ships more than 50 million secured products for customers annually, so naturally, achieving [EAL6 certification](#) is an important accomplishment for us and for our customers,” said Cédric Mayor, COO, Presto Engineering. “It is a highly-recognized criterion that provides our customers with high confidence that the security features in the products we develop for them are reliably implemented.”

Secured applications initiated with the smart card industry and now permeate most industrial applications, as well as automotive and IoT. EAL, which ranges from 1-7 (a higher level means that the evaluation completed a more stringent set of quality assurance requirements), is a critical aspect to consider when selecting an outsourced manufacturing partner for secure applications.

“As a leading outsourced operations provider for secure applications, being ‘EAL6 Certified’ sets us apart from the competition and gives our customers the confidence that the security requirements for their products have been met,” said Mayor.

About Presto Engineering

Presto Engineering provides outsourced operations for semiconductor and IoT device companies, helping its customers minimize overhead, reduce risk and accelerate time-to-market. The company is a recognized expert in the development of industrial solutions for RF, analog, mixed-signal and secured applications – from tape-out to delivery of finished goods. Presto's proprietary, highly-secure manufacturing and provisioning solution, coupled with extensive back-end expertise, gives its customers a competitive advantage. The company offers a global, flexible, dedicated framework, with headquarters in Meyreuil, France, and operations across Europe, North America and Asia.
