

## News Release

April 2021

### **Flashbond UV-3610 – UV cured Glob Top**

epoxySet introduces the Flashbond UV-3610. This highly unique epoxy chemistry was designed as a glob top encapsulant that can be cured rapidly under 365 LED light. This state-of-the-art system was specifically developed for fully automated smart card assembly lines but is also a perfect choice for damp & fill and chip module encapsulations.

UV-3610 is very low shrinkage and produces a low ionic compound that is resistant to moisture, humidity and other environmental conditions. With high volume resistivity, it offers exceptional bond strength to metal, ceramic and glass, It has superior temperature cycling performance from -55°C to 150°C. This halogen free system meets REACH and RoHS.

epoxySet is an innovative custom formulator of Epoxies, Urethanes, Silicones, Thermal Greases and UV cures for the electronic, medical, semi-conductor, optics, automotive and aerospace industries. Our extensive experience allows us to quickly modify our wide-ranging product line for any requirement.
