Achieve more productive, energy saving assembly

COLORADO SPRINGS, CO — December 2020 — Virtual Industries Inc., a leading supplier of manual vacuum handling solutions, offers the ADJUST-A-VAC™ ESD-SAFE Kit with a special AUTO-SHUT-OFF feature. A sensor automatically turns on and off the ADJUST-A-VAC, helping users to be more productive, save energy, and extend life of the unit. The kit also includes the Buna-N Static Dissipative Non-Marking Vac.

When users turn the power switch to the AUTO position, the unit will be off. When the vacuum pen is picked up from its holder, the blue LED vacuum level bar will glow to show that the power is on.

An integrated ten segment bar-graph-display visibly shows the vacuum level present during handling operations. The bar graph will show minimum vacuum level until a part is grasped and then the blue LED bar graph displays the vacuum level presented to the part being handled. Additionally, the vacuum port integrates a user replaceable inlet filter that protects operation of the tool from dust particles – the filter part number to order is VF-40M-5. Kits are available in 110 or 220 volt operation.
