## SRT thick-film resistors from Rhopoint for high-value and high-voltage applications

### High Voltage, High Ohmic Value, High Temperature Thick Film Resistors

[Rhopoint Components](#) the specialist distributor of precision electronic components, sensors, connectors and modular systems, announce the availability of thick-film resistors designed for high-value and high-voltage applications from [SRT Resistor Technology](#). The SRT product range includes high-value chip resistors, leaded HV resistors and chip-based voltage divider solutions with resistance values extending into the TΩ region.

The SRT resistor portfolio has been developed specifically for demanding applications such as high-impedance measurement circuits or high-voltage electronics where leakage behaviour, voltage stability and long-term drift directly influence system performance. The main application for these products is detection and amplification of low signals in industrial electronics .

SRT Resistor Technology products offer:

- High ohmic resistors, up to 10TΩ, and high voltage resistors in both SMD and through-hole packages
- High temperature variants available with operating temperatures up to +300°C

# Press Release

- High voltage resistors with operating voltages up to 6000 Volt (SMD) and 80 kV (leaded)
- Non-magnetic models available
- Custom voltage dividers and resistor networks options

SRT Resistor Technology GmbH, was founded in 1996 and during the last 10 years they have established a leading position on the world market for their High Value Resistors. Other important products from RST are non-magnetic resistors for Medical Electronics and glueable chip resistors for the Automotive Electronics.

For UK OEMs, the combination of SRT Resistor Technology and Rhopoint's local technical support and robust supply chain brings a clear competitive edge: faster design cycles, reduced design risk, and higher confidence in long-term field performance.

Rhopoint is an authorised partner for over twenty-five industry-leading manufacturers from around the world offering an extensive range of stocked lines and fully customised solutions to meet customer requirements. With highly skilled field-based sales engineers, technical expertise is backed by an efficient sales and distribution operation, covering their entire product range, from their UK based facility.

Editors Note: The attached image shows SRT Resistor Technology products available from Rhopoint.

## About

Rhopoint Ltd. was founded in 1975 with the aim to support engineers specialising in the design of electronics and product development by offering a selection of precision resistors to the UK market.

# Press Release

Rhopoint Components Ltd has built a reputation of quality service and parts by providing a secure and trustworthy distribution for electronic components, sensors and resistors to their customers. This is maintained through the effective implementation, ongoing maintenance and continual improvement of management systems. These include BS EN ISO 9001 certified quality management system and Cyber Essentials certification.

Within the field of Test and Measurement, Rhopoint is a group of companies specialising in the design, manufacture, distribution, service and calibration of high precision products into niche markets, globally.
