

PTW GROUP Showcases Sustainable Lifecycle Solutions at SEMICON Europa

Extending tool lifetimes, stabilizing production, and reducing operational risk

Dresden, November 18, 2025 – **PTW GROUP is participating in SEMICON Europa 2025, taking place November 18–21 in Munich and welcoming visitors in Hall B1 at Booth B1120. The event is co-located with productronica, one of Europe’s largest gatherings for electronics manufacturing and semiconductor technologies. As one of the leading partners for legacy fabs worldwide, PTW will showcase its comprehensive portfolio for extending the lifetime of semiconductor manufacturing equipment – highlighting solutions that support stable production, reduce operational costs, and secure long-term tool availability in an increasingly competitive and resource-conscious market.**

Range of Services

The PTW GROUP portfolio covers the full lifecycle of semiconductor tools and supports fabs in balancing continuity, modernization, and sustainability. This includes the supply of OEM, repaired, and refurbished spare parts, ensuring stable production even when equipment ages or original components are no longer available. At the same time, PTW develops new tools based on established process recipes, offering modernization options without disrupting qualified workflows.

Engineering expertise enables tailored adjustments to hardware and configurations, while complete refurbishment programs restore tools for renewed use – from reconfiguration and installation to production-ready qualification with warranty support.

Meet PTW at SEMICON Europa

How can existing equipment remain productive despite aging components and shifting market requirements? What role will refurbishment, lifecycle extensions, and targeted upgrades play in future capacity planning? And how can sustainability goals be aligned with operational and budget constraints? The most effective answers often emerge in direct conversation – and SEMICON Europa provides precisely that opportunity.

PTW GROUP invites semiconductor manufacturers, fab managers, engineers, and procurement specialists to visit their booth at SEMICON Europa. The team will present refurbishment concepts, upgrade paths, sustainability-driven lifecycle strategies, and new tool developments for stable and cost-efficient fab operations.

Alongside PTW, partner companies such as Helios Technical Services, Miyatsu, SiCentury, Zhuohai, and PTW SpinTec will also be represented at the booth.

PTW GROUP

PTW GROUP is a global partner for supporting legacy fabs in the semiconductor industry. Founded in Austria in 2007, the company today operates refurbishment centers and offices in Singapore, Europe, Taiwan, Malaysia, Korea, Japan, China, and the USA. With the establishment of PTW Asia Pte Ltd in Singapore in 2015, and through the acquisition of Jesse Technologies (Hitachi CD-SEM support) as well as a joint venture partnership with CinTai Formosa (ASM furnace & EPI support), PTW has further expanded its expertise and portfolio. Offering refurbishment and recycling programs, upgrades, on-site services, and new tool development, PTW ensures that legacy fabs worldwide remain productive, sustainable, and future-ready.
