QP Technologies and Promex Partner with Admati Agencies Ltd. to Expand Presence in Israel

Strategic partnership strengthens microelectronics manufacturing support in Israel

Escondido, Calif. — October 27, 2025 — QP Technologies, together with its parent company Promex Industries, is proud to announce a new partnership with Admati Agencies Ltd., appointing them as the exclusive sales representative for both companies in Israel.

This collaboration strengthens QP Technologies' and Promex's presence in the Israeli semiconductor market and enhances regional support for customers seeking U.S.-based microelectronic packaging, assembly, and advanced manufacturing services.

Admati Agencies brings extensive experience representing leading companies in semiconductor materials, packaging, and electronic manufacturing solutions. Their expertise will help ensure customers in Israel have access to the comprehensive capabilities of both QP Technologies and Promex, including rapid prototyping to production volumes, heterogeneous integration expertise, and advanced manufacturing for high-reliability applications across medical, industrial, and aerospace markets.

Manufacturing services include wafer backgrind thinning and dicing, surface-mount assembly, and flip chip and wirebond assembly in virtually any package type, including open-cavity plastic, open-molded plastic, chip-on-board, ceramic packages, and overmolded QFN/DFNs.

"We're thrilled to partner with Admati Agencies to strengthen our customer relationships in Israel," said Matt Hansen, QP Technologies' Vice President of Sales and Marketing. "Their deep market knowledge and technical expertise make them an ideal partner as we continue expanding globally."

About QP Technologies

QP Technologies provides advanced microelectronic packaging and assembly solutions,

specializing in rapid prototyping, wafer services, and high-performance packaging. Learn more at www.qptechnologies.com.

About Promex Industries

Promex Industries, based in San Jose, Calif., is a leading provider of advanced semiconductor packaging, MEMS, and biomedical device assembly. For more information, visit www.promex-ind.com.
