

FOR IMMEDIATE RELEASE

KEITH Unveils RX Technology: The Next Evolution of WALKING FLOOR® Systems

Next-Generation WALKING FLOOR® Technology Delivers Proven Reliability, Effortless Operation, and Advanced Control

[KEITH Manufacturing Co.](#), a global leader in innovative material handling solutions, is proud to introduce [RX Technology](#), the latest evolution in WALKING FLOOR® material handling solutions, engineered to deliver complete performance and peace of mind for today's demanding industries. Leveraging decades of expertise, RX Technology combines robust innovation with trusted reliability, setting a new benchmark for efficiency, safety, and operational ease.

RX Technology stands out with comprehensive thermal protection, integrating electric heat sensors and temperature switches to prevent overheating and protect critical components during the toughest jobs. Its redesigned switching valve requires no adjustments, simplifying operation and significantly reducing time spent on maintenance. The oil pressure filter, rated for up to 60 gallons per minute, ensures a cleaner system, leading to less contamination, smoother performance, and dependable system longevity.

With fewer parts and internal check valves, RX Technology reduces complexity and boosts overall reliability. The system's smarter controls feature both automatic and intuitive electronic controls, as well as optional manual options, ensuring ease of use, adaptability, and efficient unloading to suit every operator's preferences.

Operators gain complete control with flexible hydraulic oil flow, allowing for precision or speed as needed, from slow unloading to rapid discharge. Features like the automatic switching valve and electric controls promote hands-off operation, enhancing efficiency. The simplified filter design makes maintenance quicker, troubleshooting easier, and lowers total service costs.

Every element of RX Technology is proven through rigorous in-house and field validation, providing users with trust in every load and assurance against downtime. Grounded in the deep industry experience of Keith Manufacturing Co., RX Technology, which is currently patent pending, delivers lasting value, a trusted legacy, and the performance to keep businesses moving confidently into the future.

About KEITH Manufacturing Co.:

[KEITH Manufacturing Co.](#), is a global leader in material handling solutions, recognized for engineering innovative systems that streamline the movement and unloading of bulk materials. With more than seventy years of expertise, KEITH serves industries worldwide by delivering

unmatched reliability, safety, and efficiency. KEITH revolutionized the industry in 1973 with the introduction of the first commercial moving floor system, enabling safe, efficient, and non-tipping unloading for a wide array of bulk products. KEITH WALKING FLOOR® mobile systems remain the cornerstone of the company's product line, setting the global standard for versatility across agriculture, recycling and waste management, biomass and renewable energy, construction, and industrial markets. Trusted by OEM partners and operators on six continents, KEITH's solutions offer decades of engineering excellence, worldwide support, and a continuous commitment to safety and innovation. From trailer OEMs to leading fleet operators, KEITH Manufacturing Co. powers operations with proven material handling technology designed to meet the evolving needs of a demanding world.
