**FOR IMMEDIATE RELEASE**

**Shenzhen SAM Electronic Equipment to Showcase SM-800 FOUNDED Cleaner at SEMICON Southeast Asia 2026**

**SHENZHEN, CHINA — May 2026 —** Shenzhen SAM Electronic Equipment Co., Ltd. will be in Kuala Lumpur, Malaysia from May 5-7 for SEMICON Southeast Asia 2026, exhibiting at Booth 2411 alongside three partner companies in a shared space.

The team will be focusing on the SM-800 Semi-Auto FOUNDED Cleaner, a system built to handle the day-to-day realities of semiconductor manufacturing: reliable cleaning, straightforward operation, and compatibility with cleanroom environments.

The SM-800 uses a combination of spray cleaning, centrifugal drying, and hot air drying to remove contaminants from FOUNDEDs. It can process up to eight sets of 12" carriers and lids per batch, offering a practical balance between throughput and footprint. The system runs on DI water only, eliminating the need for detergents or other chemicals and simplifying both operation and waste handling.

To improve performance, the DI water is heated during the cleaning cycle, while heated nitrogen and air are used to speed up drying. Cleaning recipes can be adjusted depending on process requirements, giving users more control over results.

The equipment is compact and designed for flexibility in the cleanroom. With sliding doors on both the front and rear, it can support loading and unloading across different cleanroom classifications. DI water is not reused and is discharged after each cycle to maintain consistent water quality.

Safety has also been carefully considered. The SM-800 has been evaluated across a range of areas from electrical and mechanical safety to emergency shutdown, exhaust systems, and operator ergonomics, helping ensure it meets modern safety and environmental expectations.

Visitors to Booth 2411 can meet with the SAM team to learn more about the SM-800 and discuss specific application needs.

###

**About Shenzhen SAM Electronic Equipment Co., Ltd.**

Founded in 2005, Shenzhen SAM Electronic Equipment Co., Ltd. is a leading manufacturer of precision cleaning systems for the semiconductor and SMT industries. The company specializes in developing reliable, energy-efficient cleaning equipment for stencils, misprinted PCBs, squeegees, and other production tools. With a strong focus on research, innovation, and environmental responsibility, SAM has earned the trust of customers worldwide through its commitment to quality, performance, and long-term value.
