Press Release

William Ong to Lead Business Line Semiconductor Materials at Heraeus Electronics

Hanau, November 2, 2026 – Heraeus Electronics is pleased to announce that effective November 1, 2026, William Ong has been appointed Global Head of Business Line Semiconductor Materials. With a background in R&D, sales and general management, William Ong brings 30 years of experience in the electronics industry. His career spans research and development, sales, business development and global business leadership at SCHOTT AG.

Prior to joining Heraeus Electronics, William Ong served as General Manager at SCHOTT's Opto-Electronics Strategic Business Field, overseeing strategy, innovation and financial performance. He built product management, sales and research teams and lead M&A due diligence and integration. Earlier roles included expanding sales networks and strategic customer partnerships across Asia-Pacific and establishing an application engineering function in Greater China.

"With a strong combination of innovation and business expertise, William will strengthen our leadership team with his broad perspective on developing products, building customer relationships and growing the Semiconductor Materials business across markets and cultures," said Toni Versluijs, President of Heraeus Electronics.

About Heraeus
Heraeus is a globally active, family-owned technology group. Based in Hanau, Germany, the company comprises 15 operating companies whose products and services span the Business Areas of Metals & Recycling, Healthcare, Semiconductor & Electronics, and Industrials. In fiscal year 2024, Heraeus generated revenues of €29.4 billion and employed roughly 15,200 people across 40 countries. This makes Heraeus one of the top ten largest family-owned enterprises in Germany.

MATERIALS. INNOVATIONS. FOR GENERATIONS.

About Heraeus Electronics
Heraeus Electronics is a materials innovation partner for the electronics industry with global reach and local presence. The company develops material solutions for the automotive, power electronics and advanced semiconductor packaging market and offers its customers a broad product portfolio – from materials and material systems to services.
